L05: Learning Portfolio Milestone 1
IST 110

Identify the portfolio platform you have selected.

- I am currently taking a web-design course, and after having learned the basics of HTML and CSS, I am thinking that I'll be opting to create my own website instead of using a platform like WordPress.

Identify the method you are using to gather course assignments.

- All my course assignments are saved and organized within folders on my computer marked appropriately.
    - I'll be using folder structures to help inform me of how to organize these projects in my actual portfolio as the semester progresses

Provide an outline of the portfolio sections you have chosen.

- Here is a following list of my current headlines that I'll be using to title/organize each section
    - **Introduction** (this will contain the "about me" content; I may split this into two sections with a lesser detailed about at the top of the page and a more descriptive section near the end)
    - **Skills acquired** (this seems important to preface the content with and so I'll place this after the intro)
    - **Projects** (this will be the section that encompasses the actual assignments/projects, the order of which I'm not entirely sure of, if there are multiple assignments of a similar type I will likely create a section/sub-section dedicated to each category)
        - **Research** (example subsection, mainly focused on text-content)
        - **Learning Resources** (example subsection, includes infographics such as the one created in L03)
        - **Op-Eds** (example subsection, opinion pieces intended to convey an awareness of the tech industry)
    - **Outro** (this will contain contact information at a minimum and potentially the "about me")
- I intend to try to have all this content on a single HTML page, however, if need be (as in it becomes too bulky on a singular page), I will be creating a multi-page structure with appropriate and easy navigation between the main page and subpages. These subpages will likely only be needed for projects. This depends on if I find a visually appealing solution as I continue learning web-design.
